INTALEX

Complete Digital Transformation with Microsoft Business Premium

How one financial services firm discovered that Premium actually costs less.

The Challenge

This 70-person financial services and recruitment organisation was handling substantial amounts of personal and sensitive information daily. Their existing setup presented multiple risks:

- Limited security controls despite handling personal data
- Fragmented licensing with Basic and Standard Microsoft plans
- Compliance vulnerabilities in a heavily regulated industry

The company recognised that they needed a comprehensive security upgrade but were uncertain about the investment required and whether their size justified enterprise-level security measures.

The Intalex Solution

Intalex conducted a thorough security audit and implemented Microsoft Business Premium as a complete cloud-first solution. This involved:

Security Transformation

- Comprehensive security audit identifying vulnerabilities and gaps
- Migration to Microsoft Business Premium and implementation of advanced threat protection across all devices and applications
- Centralised device management through Microsoft Intune
- Identity and access management with conditional access policies

Infrastructure Modernisation

- Comprehensive security audit identifying vulnerabilities and gaps
- Migration to Microsoft Business Premium and implementation of advanced threat protection across all devices and applications
- Centralised device management through Microsoft Intune
- Identity and access management with conditional access policies

Rapid Deployment

- 3-4 week implementation using Intalex's pre-configured templates
- Minimal business disruption through a phased migration approach
- Staff training and support throughout the transition

Why Business Premium?

The business case was clear:

- Business Premium costs significantly less than purchasing equivalent third-party security tools separately
- The cost of one security incident would far exceed the annual licensing investment
- ROI achieved through reduced IT support requirements and eliminated server maintenance

The Results

Dramatically Improved Security

- 80%+ Microsoft Secure Score
- Complete device compliance across all company computers
- Advanced threat protection defending against sophisticated attack

Operational Excellence

- A server-free environment that eliminated unpredictable hardware costs
- Reduced IT tickets through stable cloud infrastructure
- Streamlined vendor management - single Microsoft relationship

Enhanced Productivity

- Superior video conferencing with Microsoft Teams integration
- Modern workplace enabling flexible working arrangements
- Faster information access through improved SharePoint implementation

Protect Your Business with Microsoft Business Premium

For organisations handling sensitive data - whether financial services, recruitment, healthcare, or legal - the security controls in Microsoft Business Premium aren't luxury features. Given the current threat landscape, they're business necessities.
